

**10 +10W STEREO AMPLIFIER**

- HIGH OUTPUT POWER  
(10 + 10W Min. @ D = 1%)
- HIGH CURRENT CAPABILITY (UP TO 3.5A)
- AC SHORT CIRCUIT PROTECTION
- THERMAL OVERLOAD PROTECTION
- SPACE AND COST SAVING : VERY LOW NUMBER OF EXTERNAL COMPONENTS AND SIMPLE MOUNTING THANKS TO THE MULTIWATT<sup>®</sup> PACKAGE.

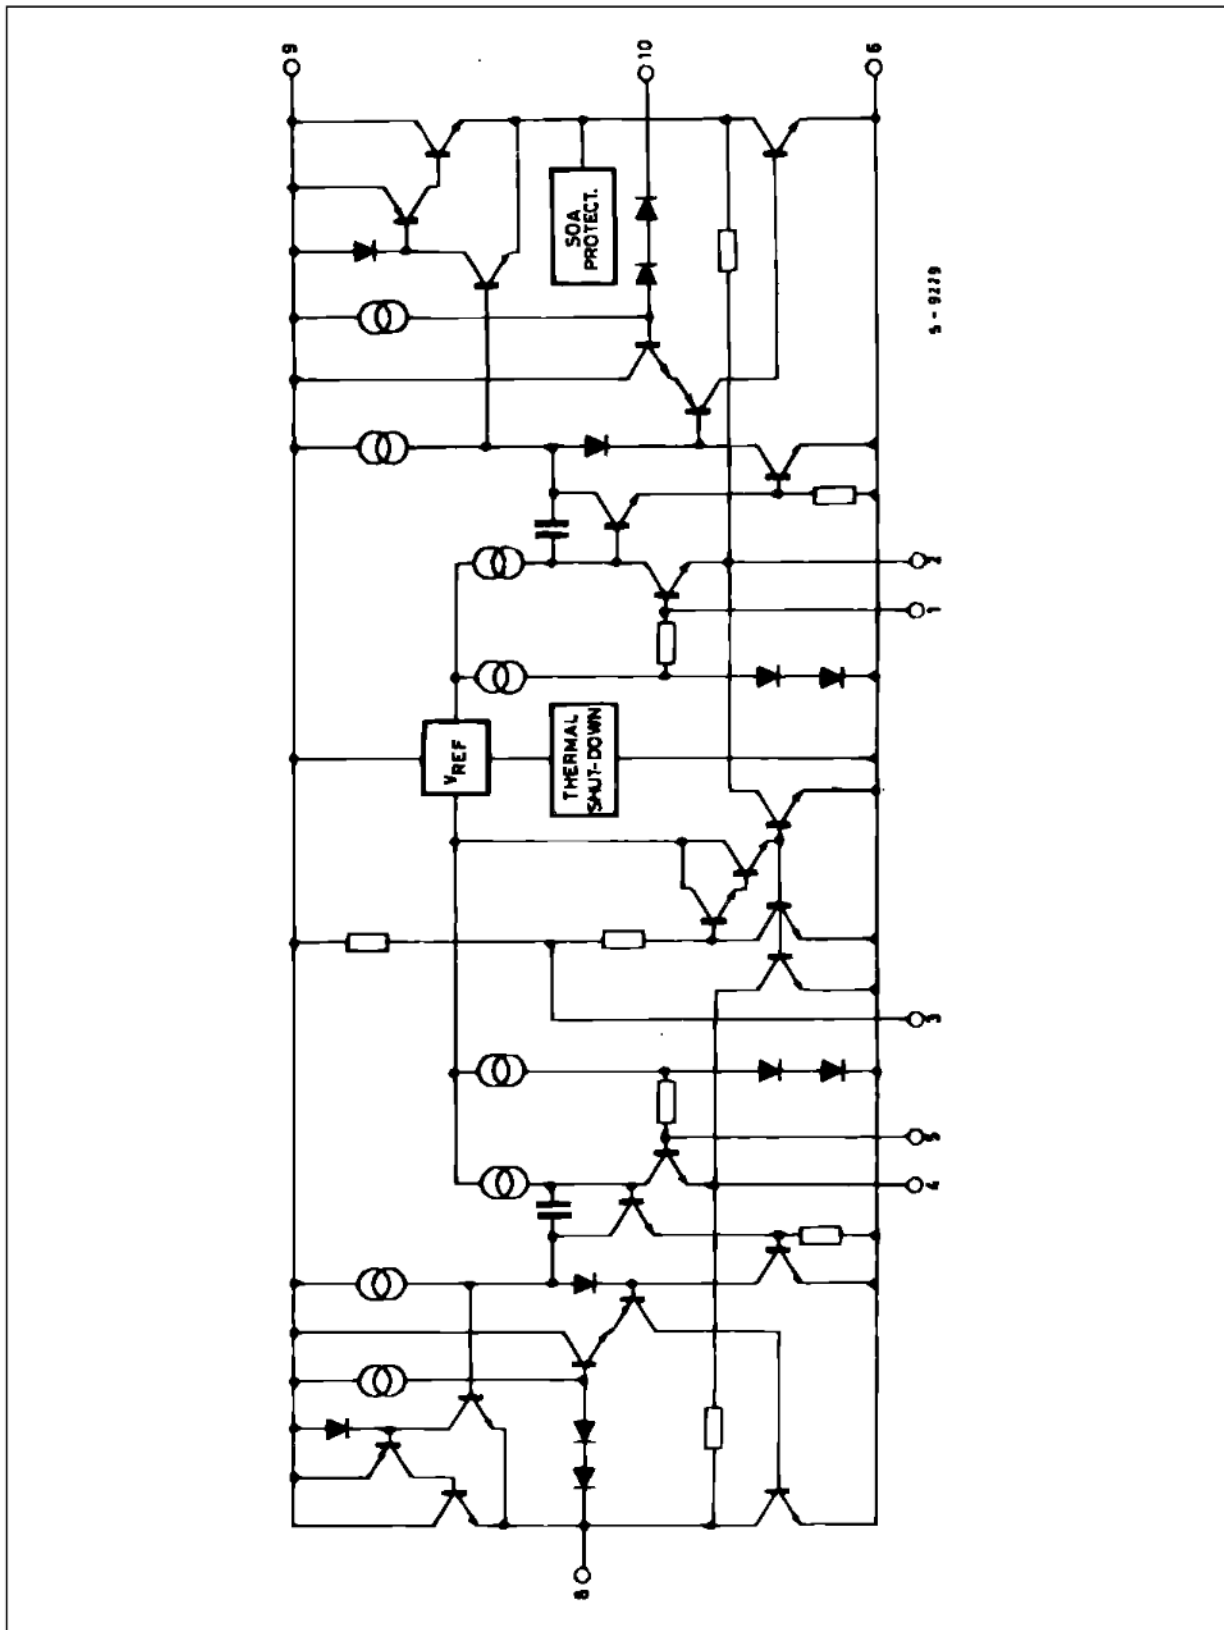

**DESCRIPTION**

The TDA2009A is class AB dual Hi-Fi Audio power amplifier assembled in Multiwatt<sup>®</sup> package, specially designed for high quality stereo application as Hi-Fi and music centers.

**PIN CONNECTION**

SCHEMATIC DIAGRAM

**ABSOLUTE MAXIMUM RATINGS**

Symbol	Parameter	Value	Unit
$V_s$	Supply Voltage	28	V
$I_o$	Output Peak Current (repetitive $f \geq 20$ Hz)	3.5	A
$I_o$	Output Peak Current (non repetitive, $t = 100 \mu s$ )	4.5	A
$P_{tot}$	Power Dissipation at $T_{case} = 90^\circ C$	20	W
$T_{stg}, T_j$	Storage and Junction Temperature	- 40, + 150	$^\circ C$

**APPLICATION SUGGESTION**

The recommended values of the components are those shown on application circuit of fig. 1. Different values can be used ; the following table can help the designer.

Component	Recommended Value	Purpose	Larger than	Smaller than
R1, R3	1.2kΩ	Close Loop Gain Setting (1)	Increase of Gain	Decrease of Gain
R2, R4	18kΩ		Decrease of Gain	Increase of Gain
R5, R6	1Ω	Frequency Stability	Danger of Oscillation at High Frequency with Inductive Load	
C1, C2	2.2μF	Input DC Decoupling	High Turn-on Delay	High Turn-on Pop. Higher Low Frequency Cut-off. Increase of Noise
C3	22μF	Ripple Rejection	Better SVR. Increase of the Switch-on Time	Degradation of SVR
C6, C7	220μF	Feedback Input DC Decoupling		
C8, C9	0.1μF	Frenquency Stability		Danger of Oscillation
C10, C11	1000μF to 2200μF	Output DC Decoupling		Higher Low-frequency Cut-off

(1) The closed loop gain must be higher than 26dB.

**BUILD-IN PROTECTION SYSTEMS**

**THERMAL SHUT-DOWN**

The presence of a thermal limiting circuit offers the following advantages:

- 1) an averload on the output (even if it is permanent), or an excessive ambient temperature can be easily withstood.
- 2) the heatsink can have a smaller factor of safety compared with that of a conventional circuit. There is no device damage in the case of excessive junction temperature : all that happens is that  $P_o$  (and therefore  $P_{tot}$ ) and  $I_o$  are reduced.

The maximum allowable power dissipation depends upon the size of the external heatsink (i.e. its thermal resistance); Figure 18 shows this dissippable power as a function of ambient temperature for different thermal resistance.

Short circuit (AC Conditions). The TDA2009A can withstand an accidental short circuit from the output and ground made by a wrong connection during normal play operation.

**MOUNTING INSTRUCTIONS**

The power dissipated in the circuit must be removed by adding an external heatsink.

Thanks to the MULTIWATT® package attaching

the heatsink is very simple, a screw or a compression spring (clip) being sufficient. Between the heatsink and the package it is better to insert a layer of silicon grease, to optimize the thermal contact ; no electrical isolation is needed between the two
