

ST3237E

± 15KV ESD-protected, 1µA, 3 to 5.5V, 250Kbps
RS-232 Transceiver with stand-by

Feature summary

- ESD protection for RS-232 I/O pins
 - ±15KV human body model
 - ±8KV IEC 1000-4-2 contacts discharge
- 1µA low power shutdown with receivers active
- Guaranteed data rate
 - 250Kbps (normal operation)
 - 1Mbps (very high speed operation)
- Guaranteed slew rate range
 - 6V/µs (normal operation)
 - 24V/µs (very high speed operation)
- 0.1µF external capacitors
- Flow-through pinout
- Low supply current 300µA
- Available in SSOP-28 and SO-28

Description

The ST3237E is a 3V to 5.5V powered EIA/TIA-232 and V.28/V.24 communication interfaces high data-rate capability and enhanced electrostatic discharge (ESD) protection at ±8KV using IEC1000-4-2 contact discharge and ±15kV using Human Body Model (HBM). The other pins are protected with standard ESD protection at ±2kV using HBM method. The ST3237C is a

transceiver (5 drivers, 3 receivers) for fast modem applications.

The device has a proprietary low-dropout transmitter output stage providing true RS-232 performance from a 3V to 5.5V supply using a dual charge pump. The device is guaranteed to run at data rates of 250Kbps in the normal operation mode and 1Mbps in the very high speed operation mode while maintaining RS-232 output levels..

27	V+	-5.5V Generated by the Charge Pump
28	C ₁₊	Positive Terminal of Voltage- Charge Pump Capacitor

2 Absolute maximum ratings

Table 2. Absolute maximum ratings

Symbol	Parameter	Value	Unit
V_{CC}	Supply voltage	-0.3 to 6	V
V+	Doubled voltage terminal	-0.3 to 7	V
V-	Inverted voltage terminal	0.3 to -7	V
$V+ + V- $		13	V
T_{IN}	Transmitter input voltage range	-0.3 to 6	V
$\overline{SHDN}, \overline{EN}$		-0.3 to 6	V
VHSCI	Very high speed control input	-0.3 to ($V_{CC} + 0.3$)	V
R_{IN}	Receiver input voltage range	± 25	V
T_{OUT}	Transmitter output voltage range	± 13.2	V
R_{OUT}, R_{OUTB}	Receiver output voltage range	-0.3 to ($V_{CC} + 0.3$)	V
t_{SHORT}	Short circuit duration on T_{OUT} (one at a time)	Continuous	
T_{stg}	Storage temperature range	-65 to 150	°C

Note: Absolute Maximum Ratings are those values beyond which damage to the device may occur. Functional operation under these condition is not implied. V+ and V- can have a maximum magnitude of +7V, but their absolute addition can not exceed 13 V.

Table 3. Shutdown and enable control truth table

SHDN	EN	T-OUT	R-OUT	R-OUTB
0	0	High Z	Active	Active
0	1	High Z	High Z	Active
1	0	Active	Active	Active
1	1	Active	High Z	Active

(unless otherwise specified $T_J = 25^\circ\text{C}$)

Figure 4. Low level receiver output current

Figure 5. High level receiver output current

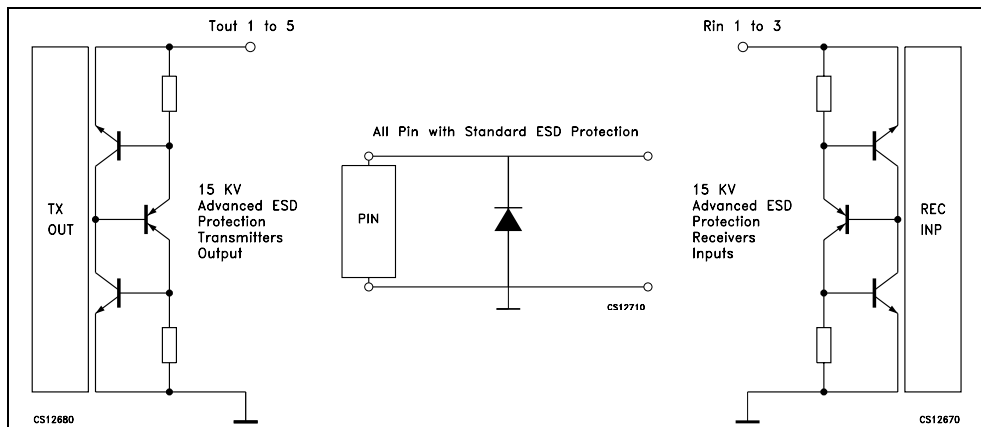

Figure 6. ESD Protection

Note: The High ESD protected pins are the I/O RS232 line, transmitter out and receiver in. The other pins guarantee $\pm 2\text{KV}$ HBM ESD protection versus ground by means of diodes.

6 Application note

This application note describes the procedure for determining the susceptibility and the test method to verify ST ESD advanced protection on RS-232 or RS485 I/O device.

Static electricity is defined as an electrical charge caused by an imbalance of electrons on the surface of a material. This imbalance of electrons produces an electric field that can be measured and that can influence other objects at a distance. Electrostatic discharge is defined as the transfer of charge between bodies at different electrical potentials. Electrostatic discharge (ESD) can change the electrical characteristics of a semiconductor device, degrading or destroying it. Any input or output port (I/O) allows access communication with other pieces of equipment by external connectors. These connectors are directly linked by the I/O pins of RS-232 or RS485 interface. ST provides the E-series by advanced high ESD protection structure. The protection functionality is tested in two different conditions:

The first model is used to simulate the HUMAN BODY MODEL (HBM) event. A similar discharge can occur from a charged conductive object, such as a metallic tool or fixture. The model used to characterize this event is known as the Machine Model. A Human Body Model circuit and waveform is presented in Figures below.

Figure 7. Human body model circuit

Figure 8. Human body model current waveform

The second model is IEC 1000-4-2 and is used to simulate the reaction of the device on equipment when subjected to electrostatic discharges, which may occur from personnel to objects near vital instrumentation. Direct (Contact) and indirect (Air Gap) applications of discharges to the equipment under test (EUT) are possible. Test characteristics are shown in circuit, waveform and table below.
